### CHAIN LINK MESH Woven from galvanized wire (W.G.W.)

The term W.G.W. is a process where galvanized wire is woven into a desired width. The average zinc coating on the finished product is 1.2 oz./sq. ft. and meets with the tolerable limites of the CAN. 2-138.1-M-80. This manufacturing process reduces the cost of the finished product. It is stocked year round in a #9 gauge or #11 gauge.

Both products are available in a variety of widths: 36", 42", 48", 60", 72", 84", 96", 120" and 144".

The uses for this product vary from medium security to the fence around your back yard.

### CHAIN LINK MESH Galvanized after weaving (G.A.W.)

The term G.A.W. is a process where black #9 gauge wire is woven into a desired width. After the chain link has been woven the complete web of fencing is hot dipped galvanized in a zinc spelter. This method makes certain that all the zinc that will adhere to the wire remains on it. None is wiped off and the zinc is air cooled on the fabric. This produces the most lasting finish it is possible to produce. The average zinc coating on the finished product may be 1.2 oz., 1.6 oz., or 2.0 oz. per square foot. 1.6 oz. meets to the CAN. 1-138.1-M80 specifications.

Since the galvanizing process on this product is more costly, it is not stocked but is available by special order.

The uses for this product vary from high security prisons to everyday security, to oil related activities, to chemical plants where highly corrosive influences are present.

### VINYL COATED CHAIN LINK MESH

The term vinyl coated is a process where a thick coating of vinyl is extruded to pre-galvanized steel wire. The gauge of the end products is determined by taking the core wire gauge plus the vinyl, (i.e. #9 gauge has an 11 gauge steel core plus the vinyl giving a finished product of #9 gauge.)

It is stocked year round in a green, white and brown - 3' through 6' and 5' & 6' in black. All in a #9 ga.

Other colours are available but must be special ordered.

The common use for this product is for residential purposes but is used at times for medium security fencing where both cosmetic appearances and security are important or where corrosive influences are a factor.

## WELDED LAWN FENCE

Lawn fence is a non-climbable fence produced from a heavy coated galvanized 12.5 gauge (2.5mm) wire. This type of galvanized coating has .80 oz. of zinc per square foot of wire surface as compared to a standard welded fence that has a .30 oz. weight of coating. Crimped horizontal line wires are welded where wires cross to give flexibility and lasting strength.

### USES:

Excellent for any area around the house or on the farm. Lawn Fence has also been used by the Ministry of Transport to fence airports in British Columbia.

### SIZES:

36" X 100'	(.91m) x (30.5m)
48" X 100'	(1.22m) x (30.5m)
60" X 100'	(1.52m) x (30.5m)
72" X 100'	(1.83m) x (30.5m)

PACKAGING: 9 rolls per pallet

### SPECIFICATIONS

- 12.5 gauge (2.5mm)
- 0.80 oz. galvanized coating.
- 2" x 4" wire spacing
